

## Scope of work

### Development Phase-I

- **Frontend website:** Refer to [www.immutable.com/](http://www.immutable.com/)

### User Features:

- **Account Registration/Login:** Allow users to create accounts and log in securely.
- **Profile Management:** Enable users to edit their profiles, update information, and manage account settings.
- **Wallet Integration:** Integrate digital wallet functionality for users to manage their cryptocurrency holdings.
- **Marketplace Access:** Provide access to the marketplace where users can buy, sell, and trade digital assets.
- **Asset Exploration:** Allow users to browse and search for various digital assets available on the platform.
- **Asset Details:** Display detailed information about each digital asset, including its history, properties, and value.
- **Purchase/Sale Transactions:** Enable users to initiate and track transactions for buying or selling digital assets (Games).
- **Payment Gateway Integration:** Integrate secure payment gateways to facilitate seamless transactions.
- **Asset Management:** Provide tools for users to manage their digital asset portfolio, including tracking, organizing, and analyzing assets.
- **Notifications:** Send notifications to users for important updates, transactions, and account activity.
- **Security Features:** Implement robust security measures to protect user accounts, transactions, and personal information.
- **Customer Support:** Offer customer support services to assist users with inquiries, issues, and feedback.

## Admin Dashboard:

- **User Management:** Allow admins to manage user accounts, including user registration, verification, and account status.
- **Content Management:** Enable admins to manage content on the website, including digital assets, descriptions, and metadata.
- **Transaction Monitoring:** Provide tools for admins to monitor and review user transactions for security and compliance purposes.
- **Reporting and Analytics:** Generate reports and analytics on user activity, transaction volume, and platform performance.
- **Security Configuration:** Allow admins to configure security settings, permissions, and access controls for the platform.
- **Customer Support Management:** Enable admins to manage customer support tickets, inquiries, and escalations.
- **Compliance Management:** Ensure compliance with relevant regulations and standards by providing tools for admins to monitor and enforce compliance measures.
- **Platform Maintenance:** Facilitate platform maintenance activities, including updates, backups, and system monitoring.
- **Communication Tools:** Provide communication tools for admins to communicate with users, such as announcements, newsletters, and notifications.
- **Feedback Management:** Allow admins to collect and manage user feedback, suggestions, and complaints.

**Development Phase-II:** Rest features, we can add in Phase-ii development along with mobile app development
